About This Game

The Language Game is a 2 player quiz-style game that will improve your vocabulary and pronunciation as you play. The tile-based game is challenging in its own right, but you can only capture tiles if you get the language puzzles right!

Key Features

- Five interchangeable languages (English, French, Italian, German and Spanish)
- Over 900 phrases (2000+ words) across 59 categories, all recorded by native speakers
- Blockbusters-style local 2 player game
- Varied language-based mini games
- Study mode that lets you learn specific categories
- Progress tracker that reinforces tricky phrases
- Multiple profiles that track progress across all languages

Finding the motivation to learn a new language can be difficult. The Language Game aims to provide that motivation through the medium of competition - everyone likes winning games, and the best way to win this one is to learn the lingo!

Gameplay

Players take it in turns to choose a tile on the board. This gives them a language-based question which if they solve wins them the tile. The objective is to link your sides of the board together, like in Blockbusters.

The twist is that you can 'sandwich' your opponent's tiles to flip them over to your side, so the shortest path to victory may not always be the best!

Learn smart, not hard

New phrases are introduced gradually so as not to overwhelm. They are spoken by native linguists in both your own language and the one you're learning to let your mind digest the new information. You can also replay any of the phrases during the learning phase, so you will never feel rushed.

The game notices phrases you have trouble with and will re-introduce them to reinforce your knowledge. If you find a really tricky category you can replay it on your own in the 'Study Mode' that randomly generates questions from the troublesome subject.

Please note that the game currently only supports local multiplayer, there is no online play.

Fun, simple, effective game. Playing with my six year old kid ahead of a trip to Disneyland Paris and he loves it... honestly, seeing him enjoying learning like this is just a beautiful thing :) The language content is great and it gives good feedback. The UI is bit clunky because of the mobile origin but it's a minor setback, and it was a pretty cheap buy so yeah, overall I'm well pleased :). I tried out the French a bit, and compared it to the free Duolingo program on the web, and I like both programs for different reasons . What I like about The Language Game is that you can switch between languages quickly, and cross reference your data, and it also appears that you don't always have to be online to use it . Go ahead and blow 5 bucks if you want to spruce up your bardic tongue . Polish, Hindi, and Japanese would be nice options to add later - I'm hoping to see more downloadable content in the future .. only cost me .49c and i'm still refunding, very basic stuff, you're better off with duolingo on your phone. Cool idea, but i really need russian, because i learn english and know russian.. I immediately regret buying this game, the main reason is that there are better free options available. You could do Duolingo, FOR FREE, and have the same amount of words and vocabulary. Also, it does not assess what level you are from the get go so if you have any sort of experience you have to start as if you know nothing. It's pointless, don't buy it.. I think the way this game works is that it assumes you know not a single word of the language you want to learn and then you have to complete all sections of level one before you move on. This is a bit extreme, so I can only recommend this to a complete beginner and when it is really cheap. So far, to me it has been a waste of money.. Waste of time, space, money and effort. Avoid even if offered for free.

I think this game is great way to start learning a new language. You can also use the Duolingo or Memrise, which is free and has more content than "The Language Game". You can also try to use the game "Influent", which is also available on steam store.. There are three main problems with this game, thus i will not recommend it.

1: Some translations are not precise. They are OK, but not precise. So the game is not feasible for any kind of serious language learning beyond wanting to learn a few phrases for summer vacation.

2: The quizzes are trivial. You can quickly spot the right answer by ruling bad ones out. However, there are some phrases that are very alike, but have totally different meaning. These are not taken into account.

3: There is zero progression, learning or revisioning plan. You just click what you want to learn. However, this way you will need to keep track of the topics you did not revise recently.

Having a free alternative, like duolingo or anki makes this program a total waste of time. Also, there are some issues with navigating as well, and the music is also irritating after few minutes.. It is clear from the begining that this is a program aimed at teaching people who know little to nothing about the language that they chose. It is a great program if you want to start learning either Spanish, Italian, German, French, or English. Just keep in mind that it wont teach you an entire language. It does not teach you how to write or rules of grammar, just how to speak a few basic things. Never the less, it is a good way to start learning a language. Of course, a language class will always be better than this, but this may be what motivates you to take those classes. For \$5.00, its not too bad.. As someone who's tried many different language programs, ranging from paid (Rosetta Stone, Babble), to free (Duolingo, Memrise), I feel comfortable saying that this app would be of some help to beginners, but would not be useful as their sole tool to learn. This app would however make an excellent supplement to a language learning routine, and the competitive features are great for anyone who's learning with a friend. This app makes practice easy and painless, unlike many flashcard apps you can find online, and for such purposes I can easily justify the \$5 price tag. Aside from merely using it as a practice tool though, any absolute beginner could use this app to get an introduction to a language. All in all, for the price, I'd certainly recommend this app to anyone who's just getting started in one of the included languages, or who is looking for a more enjoyable way to practice what they already know, however if you're expecting a full featured language course that'll get you fluent, I'd suggest looking elsewhere. But hey, it's five bucks, less than most of us pay for a meal, so if you're serious about learning, and could use a more enjoyable method of practice, go ahead and pick it up.
